

## Project News 03/2013

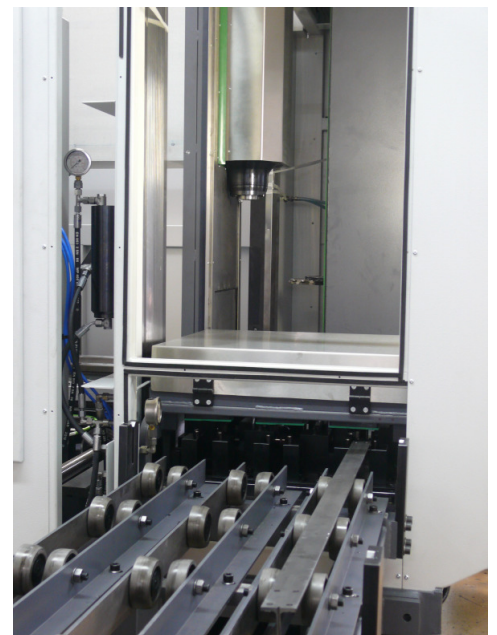

Machine type: VCC 720-T22

Application: Machining of profiles for lift shafts

Task: Processing of very long and differently sized workpieces  
1st ending: milling a groove and drilling boreholes  
2nd ending: milling a tongue and drilling boreholes

Solution: Manual supply of up to three profiles simultaneously.  
The supply is effected laterally into the working space. Slot until it stops, then fixing by clamping device.

In each working step, the profiles are processed sequentially.

Lateral feeder into the working space
